READINESS AND FORCE MANAGEMENT

NOV 07 2014

MEMORANDUM FOR DIRECTOR, PERSONNEL AND READINESS INFORMATION MANAGEMENT (P&R IM)

FROM: Director, Defense Language and National Security Education Office

SUBJECT: Department of Defense Language Codes List

Please find attached the 2014 DoD Language Codes List to update the Foreign Language List in the Common Human Resources Information Standard (CHRIS 155) website. The new list is in a table layout replacing the "Language name – Trigraph code" format. The DoD adopted the language trigraph in 2004, however, most of the personnel and pay systems still use digraph codes which causes inaccurate reporting of language test results and negatively impacts proficiency bonus payments.

The new format adds the digraph-trigraph crosswalk information to remove the confusion which sometimes arises during such conversions. Columns for a digraph crosswalk and language alternate names were added to aid in the identification of the DoD formal language name and trigraph codes. The new list also includes a Start Date and End Date which will be used to identify language codes that will no longer be used for DoD reporting requirements after the End Date. This feature alerts personnel offices that an outdated code will soon be inactivated. It also prevents the utilization of the outdated code once it is withdrawn.

There are nine DoD instructions and manuals that maintain or use language code lists and are reviewed or updated at dissimilar times. Having the list posted on the CHRIS website helps users access the latest version and precludes a need to wait for the next revision to a manual or instruction. The CHRIS listing is a sufficient reference for these publications and eliminates the need for each issuance to contain its own version of the DoD Language Code List.

My point of contact for this issue is Mr. Raoul C. Vicencio at (703) 588-1177, by email raouljose.c.vicencio.civ@mail.mil.

2014

Department of Defense Language Codes List

The 2014 Department of Defense Language Codes List features four new languages. A list of the new trigraphs appears before the main list. The equivalent digraph codes, where they exist, and alternate names were added to aid in the identification of the DoD formal language name and trigraph codes.

Language codes identified as retired have an Effective End Date. Codes associated with these mainly language families or groups are not to be used for DoD reporting requirements after the End Date. The Start Date is the approximate date when the trigraph code was adopted as a DoD standard code.

Languages with more than one digraph code can only be used to convert to trigraph codes and cannot be used to convert trigraph codes to digraph codes. For example Arabic-Maghrebi has AM and QW digraph codes; these codes can only be used to convert from digraph to trigraph code but cannot be used to convert from trigraph to digraph code.

LANGUAGE CODES NEW TO THE LIST
